FITTING AND FINISH

Performance Stainless Steel has rolled out four new additions to its ever-growing line of stainless fittings. They now offer two new low-profile vacuum fittings available with a single- or dual-port configuration. Also added are a 3/8-inch hose fitting with a 1/8-inch pipe thread and a new 1/8-inch plug. Performance Stainless fittings replace conventional metal fittings with extremely durable ultra-smooth and highly rust- and corrosion-resistant 304 stainless steel. For more information, contact Performance Stainless Steel, Inc., P.O. Box 67266, Dept. CT, Scotts Valley, CA 95067; call (866) 335-7901; visit www.performancecsst.com.

GIVING "TANKS"

Sluggish starts and clogged fuel lines can be a thing of the past for custom and classic truck owners using the new formula STA-BIL Fuel Stabilizer from Gold Eagle Co. STA-BIL's improved formulation includes a premium fuel injector and carburetor cleaner with a water-remover—making it the only additive classic truck owners need. While it's battling fuel oxidation in the gas tank and fuel system, STA-BIL's new water remover provides extra protection against corrosion. The new-formula STA-BIL disperses water in the gas tank so it doesn't accumulate at the bottom. It also reacts with the water molecules throughout the fuel system to form a combustible compound, which is burned during normal engine operation. The new formula STA-BIL also contains a cleaning agent to remove power-robbing deposits from the fuel system. Over time, these deposits can clog injectors, reducing power and fuel efficiency. Continual use of STA-BIL will prevent deposit buildup, giving custom trucks maximum performance and mileage. For more information, contact Gold Eagle Products, 4400 S. Kildare, Dept. CT, Chicago, IL 60632; call (800) 621-1251; visit www.goldeagle.com.

HOT ROD DELUXE

Hot Rod Air now offers a custom service where their Elite Standard, Elite Standard SE, or Elite Deluxe evaporator can be adapted to operate utilizing your factory heater or A/C controls. With this service, Hot Rod Air technicians take your cable or vacuum controls and adapts them to connect to and operate the functions of the Elite Series evaporators. This will provide your car or truck with a custom climate-control system that has superior cooling and heating capacity, and the temperature flexibility and will allow for a smooth firewall in your car or truck. For more information, contact Hot Rod Air, 9330 Corporate Dr., Ste. 308, Dept. CT, Selma, TX 78154; call (888) 357-0040; visit www.hotrodair.com.

LOWER ROLL CENTER

The engineers at Jim Meyer Racing Products have designed a universal Panhard bar that will lower the roll-center of your chassis. Designed for any straight axle rearend, this Panhard bar mounts parallel with the axle housing behind the rearend. This long-arm Panhard bar, mounted by an adjustable universal-frame bracket, extends beyond the axle housing centerline and mounts to the axle housing-tube bracket. The fully adjustable 1-inch diameter x .156-inch wall D.O.M. (drawn over mandrel) urethane-bushed steel-tube mounts to a special laser-cut housing-tube bracket via a QA1 adjustable rod end. The kit is available in raw steel or nickel-plated and comes complete with mounting brackets and instructions. For more information, contact Jim Meyer Racing, 1345 SE 23rd, Dept. CT, Lincoln City, OR 97367; call (800) 824-1752; visit www.jimmeyerracing.com. **CT**
